

RT&Co.
—CYBERSECURITY, INC.—
(FORMERLY MANTUA CYBERSECURITY)

Most Common Cyberattacks in 2025

Swipe to see the top threats and how they
impact businesses.

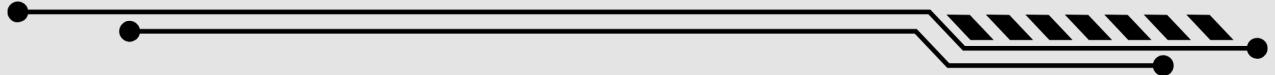

#1 Malware

Malicious software like trojans, spyware or ransomware remains the top threat.

Ransomware accounted for about **6%** of all breaches and hit industrial sectors hardest.

#2 Phishing

Human behavior is the weakest link in 68% of breaches— **80–95%** of those involve phishing attacks.

Cybercriminals use deceptive emails, texts, or calls to steal data and access systems—all it takes is one click.

#3 DDoS (Distributed Denial of Service)

Attacks flood servers or networks with fake traffic, crashing websites or critical services.

Volumes reached **71 million** requests per second, targeting finance, telecom, and government systems.
