What is RightMesh?

- Android & Java Library / API / SDK
- Network stack on-top of the network stack

- Enables multi-hop, multi-path decentralized communications between mobile devices (ie: phone-to-phone-to-phone rather than phone-ISP-cloud-ISP-phone)

- Event Driven (peers joining / leaving, data arriving, etc).

- Users who wish to sell data into the mesh earn tokens from users who wish to purchase data
